

PAIR YOUR PASSION WITH ACTION

Gain the qualitative and quantitative skills required to address the most pressing health problems in your community, the nation, and the world in the online MPH program at Purdue West Lafayette. The curriculum is CEPH* accredited.

Courses are taught by seasoned professionals with advanced academic degrees, training in public health, and real-world experience. You'll learn with peers who have varied backgrounds and interests to gain unique perspectives.

*Council on Education for Public Health

HELP OTHERS WHILE YOU LEARN VALUABLE PROFESSIONAL SKILLS

You'll culminate your public-health training with a practicum tailored to your area of interest, and a capstone project in which you prepare a grant for a community organization.

Throughout the program you have multiple experiential learning opportunities to:

- > Develop a professional network
- > Explore different work environments
- > Identify and focus on a career path
- > Apply teamwork and communication skills
- > Build grantsmanship abilities

By graduation, you're well positioned to be a successful leader in the public health arena. You have a broad understanding of health issues and the skills to address them, including:

- > Epidemiology, to identify disease trends
- > Biostatistics, to evaluate health trends and intervention approaches
- > Health system administration and management, to organize resources for public health
- > Environmental health sciences, to understand the threats and opportunities presented by environmental factors
- > Behavioral and social sciences, to engage members of the community and encourage individual and group actions that support healthy behaviors

CONCENTRATION IN FAMILY AND COMMUNITY HEALTH

Train in how to lead improvements to health and access to care for families and the communities they form.

Using the viewpoint of a contemporary family structure, you'll study social factors, nutrition, and communication, as well as the elements contributing to health disparities.

You graduate ready to develop and lead effective public-health programs as a health educator, community

health worker or program manager — roles that are expected to grow at a faster-than-average rate of 11%.*
